

Cohen, Steven L and Joan G

Synopsis of Capabilities

- Fire protection systems (insulation, detection, suppression)
- Concept development, program planning, and budgeting in the areas of fire protection, survivability, automation and control systems
- System requirements definition and ship integration design of both passive and active fire suppression systems including:
 - Magazines
 - flight deck
 - hangars
 - machinery spaces
 - composite structure
- Conduct technical reviews of design documentation, technical specifications, and contract documentation with respect to survivability and performance requirements for advanced fire protection, and associated automation/control systems
